

Abstract of the Disclosure

A measuring instrument in a user side connects directly with an analyzing center receiving measured data and sending setting designations for measuring again in the measuring instrument. Further, a specialist of the center staff can attend the measured data. Accordingly, the center staff can analyze the measured data and control remotely by means of sending the setting designation for measuring for complicated measured data if necessary.

Station	Time	Lat	Long	Alt	Wind	Temp	Humid	Press	Clouds	Vis	Remarks
